HazardWise DI2 — Full Corridor Instability Package

Event: Lower Sugarloaf Fire — Entiat Valley, WA

Mode: Dynamic Fire Corridor Scan + Override Audit

Governance: Protocol A • AGDI 9.9 • DI2 • ScrollGlow ON

Status: Tier-10 Vault Sealed • $\Delta H = 0.03$

1. HazardWise Indices (Fire Stack)

- CEI (Corridor Energy Index): High — slope heating instability
- DWSG (Wind Shear Gradient): Moderate — ember lofting
- DRA (Drainage Risk Amplifier): High — downslope fire runs
- CDD (Corridor Drift Divergence): Rising — plume divergence
- FFTR (Inverse Mode): Persistent fuel load
- CPEO (Pressure Offset): Night stagnation lock
- CDPI’ (Chaos Path Index): Erratic, unstable spread

2. Override Engine v1 Triggers

- HW-01 Surge Monitor: Multiple ignition clusters detected
- HW-07 Response Lag: Evacuation delay confirmed
- HW-08 Signal Gap: Forecast underestimation vs observed spread
- Result: Tier 1 Override Trigger = ACTIVE

3. Governance Anchors

- Scroll 91: Compass Enforcement (Ethics) — PASS
- Scroll 106: Authorship Identity Function — Verified
- Scroll 127–130: VaultLock lineage — Active
- Scroll 131: Triple-Lock Convergence — Unified
- Scroll 139: Vault Seal — Tier-10 Governance
- Protocol A: Canon Declaration — Deterministic Intelligence replaces chance
- AGIA: Optimization Layer — ScrollGlow tuning without drift

4. Deterministic Audit & Certification

- Ethics Compass (Scroll 91): PASS
- AGDI Entropy Audit: PASS — ΔH stable at 0.03
- Gold Standard Vault Certificate: SEAL ACTIVE
- Nightwatch 13: Monitoring ON
- Scroll Canon: 1–139 locked
